Different businesses have different needs, but all businesses need the same thing: a building that is strong, versatile and energy efficient. With Reaves, you get all three. You get the design, floor plans and features you want for your business, plus the strength and value you need. And with all this comes Reaves 35 years of experience, so you know your job will go smoothly and no detail of your job will be overlooked.

Reaves Buildings are built like no other. We design, build and engineer our buildings through innovative practices. They are designed to meet your needs.

WHY WOOD? Let us tell you.

- Wood is the most environmentally friendly product used in the construction market today. Wood products do not need to be mined and unlike other building materials, wood is a renewable resource. Other building products use fossil fuels and plastic which severely impacts the environment.
- Our harvesting practices ensure ecosystem survival and growth, the forests that are available for timber harvest are large enough to grow enough wood products to build 1.6 million homes each year and endlessly into the future. We also take extra care of the ecosystem to ensure its survival by planting five trees for every one we harvest. Young forests are better for growing, thriving and surviving. We only harvest trees that are old enough and that we can use the whole tree to ensure there is no waste left behind.
- It takes less energy to produce a wood stud than steel and wood is also more workable. Wood is naturally more efficient than metal and can cut heating and cooling costs by 30-50%.

Want more facts on why wood is better? Go to www.reavesbuildings.com or call us anytime at 1-800-658-3572.
